

NIEER Pre-K Data Snapshot:

Lead Teacher Workforce: Qualifications, Pay and Parity

Allison Friedman-Krauss, Ph.D. & Richard Kasmin, M.A. May 2018

Teachers are a strong direct determinant of preschool program quality, and state pre-k program polices influence who becomes and stays a teacher as well as the competencies they acquire.¹ This fact sheet reviews state policies regarding lead teacher qualifications, compensation, and professional development.

Each policy is important, but the constellation of such policies for each state pre-K program also matters because these policies are interrelated. For example, high qualifications requirements without adequate pay is unlikely to yield a highly capable work force; and similarly, the amount of support for professional development and planning time can affect teacher capabilities, morale, and performance for even the best paid, most highly qualified teachers.²

The 2016 State of Preschool survey obtained information on the policies regarding required teacher qualifications, compensation (including salary, fringe benefits, vacation time, and sick days), and paid time for planning and/or professional development.³ For each of these policies, the survey asked if there was parity with elementary school teachers for public preschool teachers in both public school and private providers. The results are displayed in Table 1 for each state.

As seen in Table 1, state-funded pre-k teachers are far from parity. Just 35 of 60 programs required all lead teachers to have a four-year college degree. Many more (52 programs) required specialized preparation in early childhood. A small number of states have policies requiring pay parity. Typically, state pay parity policies do appear to raise pre-K teacher salaries substantially. Some salary differential may remain for several reasons. For example, the average pre-K teacher may be younger and lower on the salary schedule because the preschool program has grown to its present size only recently.

In some states, parity policies extend only to pre-K teachers in the public school. This can result from explicit exemption of private program from these state policies or from school district employee contracts that apply equally to all teachers employed by the public schools regardless of grade level (at least within P-6). Full parity for salary, benefits, and paid time for planning and professional development is much more common for pre-K teachers employed by the public schools.

Actual teacher pay and qualifications can vary from the policy requirements, and some states can report this information (see Table 1). As noted earlier, teacher parity policy does not guarantee that average salary is equal. Pre-k teachers may be paid less because they have less seniority, on average. Pre-k teachers in the public schools may be paid equally even when there is no state policy for parity. In states that do not require a BA, the percentage of teachers with a BA varies from a high of 98 percent (Virginia) to a low of 13 percent (Florida).

Clearly, in some states the cost of requiring a BA (and perhaps issuing waivers for a few teachers to recognize special circumstances) would be extremely low. In other states, the cost would be substantial, especially those in which many teachers do not have even a two-year degree.

Snapshot of teacher policy details across the 60 programs in 43 states, the District of Columbia, and Guam in 2016:

- BA required: 35 of 60 programs -- up 1 program from the prior year.
- Most lead teachers may have BA degrees even in states that do not require it. In the 16 programs that do not require a BA and reported teacher degree levels, an average of 72% of teachers had a BA or higher.
- Some state pre-k programs have much higher levels of qualifications with substantial percentages of teachers, sometimes a majority, having an MA degree.
- In a few states, most teachers may have only a high school diploma.
- Specialized training in early childhood was required by 52 of 60 programs, five more than in the prior year.
- Seven programs required starting salary parity with primary school teachers for pre-K teachers in both public and private providers.
- Five programs provided services predominantly in the public schools and required parity there.
- Fifteen programs provided services through a substantially mixed delivery system and required parity only in public schools.
- Four programs (one more than in 2015) required full salary schedule parity in all settings.
- All but one program that required starting salary parity for public school pre-K teachers also required long-term salary parity (across the full salary schedule).
- Most but not all programs requiring salary parity also required prorating salary for difference in annual hours (for example, if some teachers work longer hours and a full year rather than a school year).
- Just one state extended fringe benefit parity to pre-K teachers in private settings. Fringe benefit parity in public schools was much more common but still fell short of half the programs.
- Paid planning and/or professional development parity for pre-K teachers in private providers as well as public schools was reported by 10 programs (and increase of two from 2015) with just over half requiring this in public schools.

About NIEER

The National Institute for Early Education Research (<u>NIEER</u>) at the Graduate School of Education, Rutgers University, New Brunswick, NJ, conducts independent, objective research to inform early childhood education policy promoting physical, cognitive and social development for all young children to succeed in school and later life.
