ACCESS TO QUALITY PRE-K MAKES DISTRICT OF COLUMBIA A LEADER

D.C. Pre-K Efforts Ranked Number 1 for Funding and Enrollment

[NEW YORK, NY]—Many 3- and 4-year olds across the nation still lack access to high-quality preschool education despite modest gains in enrollment, quality, and funding, according to an [annual report](#) by the nonpartisan National Institute for Early Education Research (NIEER) at Rutgers University. While several states, including New York, and D.C. made significant progress through a concerted effort to increase enrollment and funding and improve quality, progress is slow and uneven nationally. Quality standards are particularly low in some of the nation’s largest states like California, Florida and Texas. Despite the relatively good news this year the rate of progress is so slow that it will take 150 years for the nation to reach 75 percent enrollment in state pre-K even at age 4.

In D.C., pre-K enrollment was up by 186 children in 2014-2015, while D.C. also maintained consistent progress in terms of quality – meeting 9 of NIEER’s quality standards benchmarks. D.C. ranks first in per-child state spending at \$16,431, and ranks 1st for enrollment of 4-year-olds (86 percent) as well as 3-year-olds (64 percent). In 2014-2015, D.C. increased its pre-K funding by \$13.3 million (7 percent) after adjusting for inflation. While total pre-K enrollment increased, the percentage of eligible children served appears to have decreased. However, it should be noted that the Census estimate for the number of DC preschool-age children used to calculate this percentage seems unusually low for 2013. Generally, the number of preschoolers living in D.C. appears to be rising.

“The District recognizes that its economic future depends on early investment in its youngest citizens and is doing something about it,” said NIEER Director Steve Barnett. “Ensuring that every child has access to high-quality preschool can pave the way for their success in school, on the job, and in D.C. communities. We’ve seen substantial progress in the District in recent years,” he said.

The State of Preschool report for the 2014-2015 school year, which includes objective state-by-state profiles and rankings, indicates that urgent action is needed from lawmakers at all levels of government to ensure that every child – particularly those from low-income families – have access to high-quality early education. For the first year, NIEER also analyzed states’ early education workforce and Dual Language Learner (DLL) policies, which reveal D.C. has developed a variety of supports to children who are DLL, including offering recruitment and enrollment materials in a variety of languages; collecting data on home language, ethnicity, and migrant status of children enrolled in the program; and using a variety of developmental screenings and assessments to identify children as DLL and develop individualized supports. D.C. pre-K teachers do not have salary parity with K-3 teachers.

The report finds that for the nation as a whole, total state spending on pre-K programs increased by 10 percent, or \$553 million, since the previous year, bringing state spending in 2014-2015 to over \$6.2 billion. The number of children served by state-funded pre-K served increased by 37,167 in 2014-2015, bringing the total to almost 1.4 million children – the largest number of children ever served by state-funded pre-K. With an average rate of \$4,489, states also made one of the most significant increases in spending per child in recent history.

Despite these gains, the report's findings underscore that those states like California, Florida, and Texas with the largest populations of young children are falling behind—they were among the states that met the fewest quality standards benchmarks, and Texas and Florida also reduced enrollment and spending in 2014-2015. Nationally, enrollment has risen by just one percentage point for both 4- and 3-year olds over five years. The sluggish pace of change disproportionately impacts low-income families.

“We’re encouraged to see several states increasing in enrollment and improving quality, but access to high-quality pre-K in the United States remains low and highly unequal,” said Barnett. “Expanding access to quality pre-K programs is one of the best investments we can make, and it’s critical that we raise and standardize salaries for early education teachers and have strong Dual language Learner policies in states with large Hispanic populations. State governments should increase and stabilize funding for pre-K and raise standards for the benefit of all children.”

The State of Preschool Report reviews state-funded pre-K programs on 10 benchmarks of quality standards, including the presence of a qualified instructor, class size, teacher-to-student ratio, presence of an assistant, and length of instruction per day.
