ACCESS TO PRE-K IN MAINE OUTPACES OTHER STATES

No Progress on Program Quality Standards but Funding Rose 3 Percent

[NEW YORK, NY]—Many 3- and 4-year olds still lack access to high-quality preschool education despite modest gains in enrollment, quality, and funding, according to an [annual report](#) by the nonpartisan National Institute for Early Education Research (NIEER) at Rutgers University. While several states, including New York and Maine made significant progress through a concerted effort to increase enrollment and funding and improve quality, progress is slow and uneven nationally and quality standards are particularly low in some of the nation's largest states like California, Florida and Texas. Despite the relatively good news this year the rate of progress is so slow that it will take 150 years for the nation to reach 75 percent enrollment in state pre-K even at age 4.

In Maine, enrollment was up by over 5,080 children in 2014-2015, but Maine made no progress on quality standards— meeting 5 of NIEER's 10 minimum quality standards benchmarks. Maine increased its state funding (3 percent) in 2014-2015, when adjusted for inflation. In 2015-2016, new Public Preschool Program Standards went into effect and are likely to result in additional quality standard benchmarks being met next year.

"It's gratifying to see that Maine recognizes that the state's economic future depends on early investment in our kids," said NIEER Director Steve Barnett. "Ensuring that every child has access to high-quality preschool can help pave the way for their success in school, on the job, and in Maine communities."

The State of Preschool Report for the 2014-2015 school year, which includes objective state-by-state profiles and rankings, indicates that urgent action is needed from lawmakers at all levels of government to ensure that every child – particularly those from low-income families – have access to high-quality early education. For the first year, NIEER also analyzed states' early education workforce and Dual Language Learner (DLL) policies, which reveal that Maine is one of 10 state pre-K programs that allocate extra dollars to serve DLLs. In addition, DLLs are assessed in their home language. Pre-K teachers do not have salary parity with K-3 teachers, even though they are required to have a Bachelor's degree and early childhood certification.

The report finds that for the nation as a whole, total state spending on pre-K programs increased by 10 percent, or \$553 million, since the previous year, bringing state spending in 2014-2015 to over \$6.2 billion. The number of children served by state-funded pre-K served increased by 37,167 in 2014-2015, bringing the total to almost 1.4 million children – the largest number of children ever served by state-

funded pre-K. With an average rate of \$4,489, states also made one of the most significant increases in spending per child in recent history.

Despite these gains, the report's findings underscore that those states like California, Florida, and Texas with the largest populations of young children are falling behind—they were among the states that met the fewest quality standards benchmarks, and Texas and Florida also reduced enrollment and spending in 2014-2015. Nationally, enrollment has risen by just one percentage point for both 4- and 3-year olds over five years. The sluggish pace of change disproportionately impacts low-income families.

“We’re encouraged to see several states increasing in enrollment and improving quality, but access to high-quality pre-K in the United States remains low and highly unequal,” said Barnett. “Expanding access to quality pre-K programs is one of the best investments we can make, and it’s critical that we raise and standardize salaries for early education teachers and have strong Dual language Learner policies in states with large Hispanic populations. State governments should increase and stabilize funding for pre-K and raise standards for the benefit of all children.”

The State of Preschool Report reviews state-funded pre-K programs on 10 benchmarks of quality standards, including the presence of a qualified instructor, class size, teacher-to-student ratio, presence of an assistant, and length of instruction per day.
