The District of Columbia Leads the Nation in Preschool Access and Funding Amid Pandemic

State funding for preschool programs declined nationally for the first time since 2014, enrollment decreased in almost every state

NEW BRUNSWICK, NJ – The COVID-19 pandemic highlighted and intensified existing problems of access to high-quality early childhood education in the nation. D.C. remained the leader in preschool access for 3- and 4-year-olds, and funding despite small decreases in enrollment and spending during the 2020-2021 school year, according to the 2021 State of Preschool Yearbook, released today by the National Institute for Early Education Research (NIEER) at the Rutgers Graduate School of Education.

Key findings from the annual survey - focused on the first school year fully impacted by the COVID-19 pandemic – are summarized below. In 2020-2021, many states funded preschool to maintain capacity despite unprecedented drops in enrollment due to the pandemic. To account for this, we report both spending per child and spending per child if the program was at capacity (full enrollment equivalent). For some states, the two are the same. States are ranked on the latter.

- Enrollment in state-funded preschool in the District was 12,923, a decrease of 970;
- State spending for preschool programs in the District was $248,483,087, (including federal pandemic relief), a decrease of $12,241,541 (inflation adjusted);
- Spending per child and spending per full enrollment equivalent was $19,228;
- The District met 4 of 10 quality standards benchmarks;
- The District remained within each of universal enrollment at age 3 as well as age 4 despite pandemic-related declines in enrollment.

According to the report, 298,000 fewer children were enrolled in preschool nationally than in the prior year due to difficulties created by the pandemic such as health risks, closed classrooms, and remote preschool. States across the country served less than 30 percent of 4-year-olds and less than five percent of 3-year-olds in 2020-21. Most states preserved capacity during 2020-2021 allowing enrollments to rebound in the current year, but far too many children still lack access to preschool. Further, total state pre-K spending was $8.97 billion, an inflation adjusted decrease of
nearly $255 million (3%) from the previous year. Nationally, this is the largest decline since the Great Recession. States also used at least $440 million in pandemic relief funding to support preschool, more than offsetting the decline in state spending and preserving pre-K capacity that otherwise would have been lost. However, nationally, state spending per child remains about the same as it was 20 years ago, adjusted for inflation.

“Our country has yet to adequately invest in high-quality preschool programs, while the pandemic has erased a decade of progress and exacerbated inequality,” said W. Steven Barnett, Ph.D., NIEER’s founder and senior co-director. “Children and parents in the District need high-quality, full-day preschool programs that support early learning and parental employment. The pandemic has made it even clearer that such preschool programs are essential for young children and their families. The District of Columbia is a national leader but with the pandemic even greater efforts are needed to ensure all children access high quality programs.”

“Too many children across the country missed out on a year of learning. The District must continue to implement best practices that mitigate health risks in order to get children back into classrooms,” said Allison Friedman-Krauss, Ph.D., NIEER assistant research professor. “And teachers are burnt out as they’ve worked to provide support and learning to young students amid the challenges of the past year. There is no time to waste. The District must continue to provide resources to remain a leader in preschool access for 3- and 4-year-olds.”
